

Comments of the organizers on the record  
of problem A, contest of 2012, MPI+OpenMP

date: September 19, 2012

time: 894 msec, speed-up: 18.19

MPI and OpenMP parallelism is used, with one process per node and 8 threads in each process. The obtained speed-up is satisfactory, but far from the maximum achievable (the efficiency is 0.56), so there is room for additional improvements.
